

Serial No. 10/534,307

Art Unit: 1621

In the Claims:

Please enter the following amended claims in the application. This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-15 (Canceled)

Claim 16 (Previously presented): A process for the production of esters of organic carbonyl compounds with alcohols by carrying out an esterification reaction in the presence of a catalyst containing an inorganic phosphorus(I) compound and a titanate, which comprises:

- (1) mixing the organic carbonyl compound and the inorganic phosphorus(I) compound to form a mixture;
- (2) filtering the mixture;
- (3) adding the alcohol and the titanate to the filtered mixture to form an alcohol-carbonyl mixture; and
- (4) esterifying the carbonyl compound in the alcohol-carbonyl compound mixture.

Claim 17 (Previously presented): The process as claimed in claim 16, wherein, the carbonyl compound comprises a fatty acid containing 8 to 22 carbon atoms.

Claim 18 (Currently amended): The process as claimed in claim ~~45~~ 16, wherein, the carbonyl compound comprises a hydroxyfatty acid containing 8 to 22 carbon atoms.

Claim 19 (Previously presented): The process as claimed in claim 16, wherein, the organic carbonyl compound comprises at least one fatty acid selected from the group consisting of

Serial No. 10/534,307

Art Unit: 1621

polyfatty acids and polyhydroxyfatty acids with a degree of self-condensation of 2 to 20.

Claim 20 (Previously presented): The process as claimed in claim 16, wherein, the alcohol comprises a polyol.

Claim 21 (Previously presented): The process as claimed in claim 16, wherein, the titanate comprises a titanate which is capable of forming esters with the alcohol.

Claim 22 (Previously presented): The process as claimed in claim 21, wherein, the titanate is added in a quantity of 0.01 to 0.1% by weight, based on the total quantity of organic carbonyl compound, alcohol and catalyst.

Claim 23 (Previously presented): The process as claimed in claim 16, wherein, a phosphorus(I) acid or salt thereof is used as the phosphorus(I) compound.

Claim 24 (Previously presented): The process as claimed in claim 23, wherein, the phosphorus(I) compound is present in a quantity of 0.1 to 1% by weight, based on the total quantity of organic carbonyl compound, alcohol and catalyst.

Claim 25 (Previously presented): The process as claimed in claim 16, wherein, before the filtration step (2), an inorganic base is added to the mixture containing the organic carbonyl compound and the inorganic phosphorus(I) compound.

Claim 26 (Previously presented): The process as claimed in claim 25, wherein, the inorganic base is added in a quantity sufficient to neutralize the phosphorus(I) compound substantially completely.

Claim 27 (Previously presented): The process as claimed in claim 16, wherein, in step (1)

Serial No. 10/534,307

Art Unit: 1621

of the process, the organic carbonyl compound and the inorganic phosphorus(I) compound are mixed for at least 20 minutes at a temperature of from 20°C to 220°C.

Claim 28 (Previously presented): The process as claimed in claim 16, wherein, the esterification reaction is carried out in a melt or in a nonpolar, inert organic solvent.

Claim 29 (Previously presented): The process as claimed in claim 16, wherein, the esterification reaction is carried out in a melt at a temperature below 240°C.

Claim 30 (Previously presented): The process as claimed in claim 16, wherein, at least the esterification reaction is carried out in an inert gas atmosphere.

Claim 31 (Previously presented): The process as claimed in claim 16, wherein, the alcohol comprises at least one member selected from the group consisting of polyalkylene glycol, glycerol and polyglycerol.

Claim 32 (Previously presented): The process as claimed in claim 16, wherein, the titanate comprises a tetraalkyl orthotitanate.

Claim 33 (Previously presented): The process of claim 32, wherein, the titanate comprises at least one member selected from the group consisting of tetraisopropyl titanate and tetrabutyl titanate.

Claim 34 (Previously presented): The process of claim 25, wherein, the inorganic base comprises a carbonate.

Claim 35 (Previously presented): The process of claim 17, wherein, the fatty acid contains from 12 to 18 carbon atoms.
